

RUSLAN KARYMOV

AI Enablement & Automation Lead · Creative, marketing and business operations

Varna, Bulgaria · Remote, EU · karusrus@gmail.com karusrus.github.io · github.com/karusrus · linkedin.com/in/ruslankarymov · behance.net/karusrus

Selected cases — [Swimply](#) — 300 creatives a day, generated · [Job offers as NFTs on Polygon](#) · [Solana DEX Signal Scanner](#) — designed and shipped solo · [Design decisions that start in the data](#)

PROFILE

AI Enablement & Automation Lead who turns manual operations — creative, marketing, HR, data — into measured, AI-assisted production lines with a human approval gate. Eleven years at Exness, a regulated fintech that grew from roughly 20 people to 5,000+ across 23 markets, where every asset passed compliance review; there I led the weekly creative pipeline of ~20 people, automated HR offers end to end into verifiable certificates on Polygon, and raised landing-page conversion 50%+ through A/B testing. At Twigeo the generative pipeline for Swimply shipped ~300 ad creatives a day where one was made by hand (ROAS +50–70%), SQL-based winner selection cut CPA 20–25%, and localised banners went out across 23 markets through the Figma API, cutting localised production from a day to an hour.

Three habits behind the numbers. **Engineering:** a licensed chief engineer who led a 50-person design-engineering team, which is where I learned to break a vague goal into a delivery structure that holds — TRIZ, FEA, ISO/GOST. **Governance:** AI Expert on Horizon Europe projects at GDSI, where an AI component ships only under the programme's mandatory ethics and data-governance requirements; brand governance under Real Madrid CF, Red Bull Racing, Cisco and Dell guidelines, with a rights holder approving on the other side; a national data dictionary for egov.kz. **Design:** art direction and product surfaces for 2M+ users, which is why the systems I build get used, not just deployed.

Hands-on ML since 2017, before the LLM wave. Straight about the boundaries: I do not train models, and my automation has run at team and agency scale.

WHAT I DO

Find the use case and prove the number — map a workflow, pick the step where machines beat people, run a pilot, report throughput, cycle time and cost per unit against the baseline.

Build the production line — APIs and templates (n8n, Figma, Bannerbear, BambooHR), local and frontier models in swappable chains, SQL-driven selection, dashboards in Tableau, Sigma, Power BI.

Get people to use it, and keep it safe — adoption measured, not assumed; an AI-system register, human approval gates, EU AI Act Article 50 transparency, and brand and rights-holder rules encoded in the generating layer rather than a PDF.

EXPERIENCE

Independent — AI Enablement & Automation Lead

2025 – present · Clients under NDA

- **AI Act Transparency Kit** — open-source n8n module for the deployer side of Article 50: classification including deep fakes per Art. 3(60), burnt-in labels, a person decides in a Slack thread, decisions in a Postgres ledger that is append-only and hash-chained by database triggers, registry of every AI system on the instance with path analysis; installs with one docker compose command
- **teardown-engine** — nine-station pipeline from a Meta Ad Library query to a competitive teardown: local models tag hundreds of ads at zero cost, Claude judges only contested labels, every provider is a config entry, production waits for human approval
- **resume-lab** — offline semantic search over a CV archive with requirement-by-requirement gap detection: 1,200-CV demo, 50 clusters, ~250 ms per query, built for 12,000
- **pipeline-map** — open-source canvas for pitching an automation before it exists ([karusrus.github.io/pipeline-map](#))
- Brand and visual identity for a quantitative trading firm (NDA); data and analytics consulting

GDSI Limited — AI Expert · Strategic Visualisation Consultant

October 2023 – August 2025 · International development consultancy; clients include the European Commission, European Parliament, Asian Development Bank, World Bank and UN across 100+ countries

- AI Expert on Horizon Europe projects: designed the organisational and technical pipeline behind analysis of public discourse at scale — how the material moves, who decides and on what; every AI component delivered under the programme's mandatory ethics and data-governance requirements, with NotebookLM and custom AI workflows making complex data legible to non-technical committees
- Final strategic link in tender proposals for the European Commission, European Parliament and Asian Development Bank — turning heterogeneous multi-expert and financial inputs into institutional-grade visual narratives for evaluation committees
- Architected "Europa Experience" physical and digital spaces across European capitals; authored 100+ page strategic tender documents for the European Parliament

DexTools — UX & Dashboard Audit Consultant

2024 · Freelance · Leading global DEX analytics platform for DeFi and Web3 traders

- Independent audit of the platform's data presentation — signal-to-noise, information hierarchy, first-view metrics, widget layout — delivered as an authored video walkthrough prioritised on an impact/effort matrix

Twigeo — Creative Performance Lead

October 2023 – March 2024 · Top-tier global performance marketing agency · Clients: Uniswap, Duolingo, SoundCloud, AVID, Heatonist, Swimply

- Directed creative and UX strategy for **Uniswap**, the largest decentralised exchange: audience and competitor analysis carried through into product recommendations, among them surfacing cross-chain swap inside the interface rather than as a separate flow
- Built an automated localised banner production pipeline on the **Figma API + Airtable**, scaling across 23+ language markets and cutting localised production from a full day to an hour per asset set
- SQL-integrated creative management system for automated A/B winner selection and evergreen deployment — **20–25% CPA reduction** with CTR improvement across pools of 6–8 creative variants per campaign; dashboards in Tableau, Sigma and Power BI
- Built an end-to-end generative creative pipeline for **Swimply** on the **Bannerbear API** — top platform listings composed into brand templates and shipped to TikTok, Meta, X and Google Ads at **~300 creatives a day** (1/day manually), lifting ROAS 50–70%
- Developed custom **Midjourney** style models for reproducible brand identity at scale; Jasper AI for multi-market copy

Career break — self-directed

2022 – 2023

Exness — Design Lead · Marketing Analytics Lead

2011 – 2022 · Global fintech broker · Joined at roughly 20 employees; company grew past 5,000 across global offices

- Led the weekly creative pipeline of ~20 people — design, motion and video, copy, translators, analysts — as functional lead, at 500+ assets a week, in a regulated fintech where every asset passed compliance review
- Automated HR offer generation end to end: BambooHR REST API into personalised interactive PDF offers, extended to **NFT certificates on Polygon** as verifiable non-transferable offers — an industry-first use of blockchain for employer branding
- Built a multilingual UTM tracking system across 23+ languages; coordinated 23+ translators through CrowdIn; selected Frankfurt Airport as optimal OOH placement via a weighted CPM/GRP scoring matrix
- Drove a **50%+ landing page conversion increase** through iterative A/B testing on Unbounce — hypothesis, test design, metric analysis, design decision
- Owned the Exness brand book and corporate identity system through a decade of evolution, from startup mark to globally recognised fintech brand across 23+ markets
- Art directed elite co-branding: **Real Madrid CF** (2+ years, 20+ markets), **Cristiano Ronaldo** (motion design), **Red Bull Racing** (OOH, social, localised), **Inter Milan**, and the global **WWF** campaign — every asset approved by the rights holder before release
- Designed the product and acquisition surfaces of **social trading** (2M+ users), the **Exness mobile app** across 23+ markets and the account-type ladder, with interfaces tested on users
- Delivered executive dashboards, HTML5 interactive banner campaigns and campaign performance reviews to CEO, CTO and CMO

Curvature — Visual Narrative & Co-branding Consultant

2018 · Six-month contract, parallel to Exness · Clients: Gartner, Cisco, Dell

- Turned dense **Gartner** analyst material into visual narratives C-suite executives actually read
- Ran co-branding across **Cisco** and **Dell**: one banner system in six IAB formats, HTML5 through DoubleClick, every asset approved by both Curvature and the trademark owner

EARLIER

Loyalty Peak Consulting — Data Governance Lead · 2010 · Government of Kazakhstan (egov.kz) — data governance for a national platform: Data Dictionary, taxonomy, master data model and quality rules across 8,000+ forms, 8 analysts in 4 countries; ~40% fewer unique data fields; egov.kz now in the global top 10 of the UN E-Government Development Index (2024).

Teplotproekt — Chief Engineer of Projects (ГИП) · 2009–2011 — licensed ГИП signing off multi-discipline industrial projects for LUKOIL and Gazprom: a client brief broken into disciplines, standards (ISO/GOST) and deliverables; ANSYS finite element analysis, MATLAB, TRIZ.

UECHM — Chief Engineer / 3D Engineer · 2007–2009 — led a 50-person design-engineering team (design and 3D engineers, FEA specialists); TRIZ and FEA turned a vague cost target into a delivery structure: production cost -17%+ at Katur Invest, verified by the client.

SKILLS

AI & automation — n8n (sub-workflows, approval gates, Slack and Postgres nodes), Docker Compose, Postgres, Python, REST APIs (Slack, BambooHR, Figma, Bannerbear), local models (Ollama / LLAMA), Claude and OpenAI APIs, swappable-provider architecture, Midjourney custom style models, Stable Diffusion, NotebookLM, prompt engineering, evals and bootstrapped validation

Governance & compliance — EU AI Act Article 50 (deployer duties, deep fakes per Art. 3(60)), AI-system registry with path analysis, human approval gates, provenance manifests, append-only hash-chained audit logs, consent references (GDPR), brand governance with rights holders, Horizon Europe ethics requirements, data dictionaries and master data

Engineering & operating model — breaking goals into delivery structures, TRIZ, FEA (ANSYS), MATLAB, ISO/GOST, process redesign, throughput / cycle-time / cost-per-unit reporting, SCRUM, Jira, Monday.com, MS Project, executive reporting, budgeting

Data & analytics — SQL, Python, Tableau, Power BI, Sigma, Excel and Google Sheets, dashboard and infographic design, A/B testing, UTM tracking, funnel analysis, CRO, CPM/GRP and media mix analysis, bootstrapping and statistical validation

Design & art direction — Adobe CC, Figma, Affinity, brand systems and brand books, art direction, design systems and components, RTL/LTR localisation across 23+ markets, CrowdIn, OOH and DOOH, print, HTML5 interactive banners

Presentation & narrative — executive decks for CEO/CTO/CMO and evaluation committees, institutional infographics, 100+ page tender documents, data storytelling, impact/effort prioritisation, EU institutional communication

Video, motion & Web3 — After Effects, Premiere Pro, DaVinci Resolve, Apple Motion, Final Cut Pro, ProRes 4444 and WebM alpha workflows, motion design for talent campaigns; on-chain analytics (Helius, BitQuery), Solana, NFT smart contracts, Polygon

Languages — Russian (native), English (fluent), Bulgarian (fluent)

EDUCATION & CERTIFICATION

Master's-level degree, IT Systems & Technologies — five-year specialist programme, Ural State Technical University (UrFU) · Licensed Chief Engineer of Projects (ГИП)

Hands-on ML since 2017: Machine Learning — Stanford University, Andrew Ng (2017) · **Big Data, 5-course track** — UC San Diego · **Deep Learning** — DeepLearning.AI
